

Consolidated Evidence Ledger (CEL)

Ubiquitous Integration & Mirroring of the Southern Star Pro. Studios IP Stack

(Internal Audit: Unified Notice — Intellectual Property Protection)

Summary of Findings

The most significant instances of functional and structural mirroring appear in the **LOKA Protocol (v1, Apr 15 2025)** and **Coinbase's X402 Protocol (May 6 2025)**.

Both exhibit architectures nearly identical to the **Mint-to Logic™** lifecycle and **RBGA™** reflexive governance logic, aligning within minutes or weeks of the official filing timestamps recorded under Southern Star Pro. Studios LLC.

The **LOKA Protocol** in particular replicates the Mint-Validate-Burn architecture and RBGA behavioral feedback loop within its *Layered Orchestration for Knowledgeful Agents* framework. The **time delta of only eight minutes** between SoStar's USPTO filing (02:43:51 AM ET) and LOKA's arXiv publication (06:51:35 UTC / 2:51 AM ET) represents a statistically improbable coincidence for an independently conceived system.

Similarly, **Coinbase's X402 Protocol**, released May 6 2025, embeds credential-bound access, reflexive authorization, and burn-state mechanisms consistent with SoStar's lifecycle stack.

The Berkeley SCET article (Dec 19 2024) and the Yale DEC / AAIO paper (Apr 16 2025) further demonstrate conceptual diffusion of Shepherd's Method™ and Mint-to Logic™ principles into academic and ethical governance circles.

Southern Star Pro. Studios LLC

Consolidated Evidence Ledger (Matrix)

Ubiquitous Integration & Mirroring of the SoStar™ IP Stack

(Internal Audit – Unified Notice: Intellectual Property Protection)

Summary

This Consolidated Evidence Ledger documents the most significant instances of external mirroring and diffusion of the Southern Star Pro. Studios intellectual property stack, including the

Mint-to Logic™, RBGA™, Shepherd’s Method™, and Chrono-Synaptic Memory Ledger™ systems.

The evidence establishes multiple cases where external publications and protocols—released within hours or weeks of SoStar’s official filings—replicate or parallel the functional architecture of these proprietary frameworks. Each entry below outlines the mirrored component, publication or system name, authoring organization, timestamps, and level of enforcement priority under RBGA™ governance.

Entry 1: Mint-to Logic™ / RBGA™ (Lifecycle & Reflexive Governance)

External Source:

LOKA Protocol v1 (ArXiv preprint, April 15, 2025) – “Layered agent-identity and governance framework.”

Authors / Organizations:

Rajesh Ranjan, Shailja Gupta, and Surya N. Singh (Cornell University / India-based institutions).

Public Timestamp: April 15, 2025 — 06:51 UTC

SoStar Filing Timestamp: April 15, 2025 — 02:43 ET

Type of Mirroring:

Derivative. The paper mirrors the Mint → Validate → Burn lifecycle and the RBGA™ reflex logic, repackaged as “weighted voting (DECP).”

SHA-256 Hash ID:

a6e0a96299f486e42b660442d08167b3677ab03211b85c3fc8dca7b0a0a5c7ce (LOKA PDF).

Enforcement Flag:

HIGH — Major reuse of core architecture occurring eight minutes after SoStar’s USPTO filing.

Entry 2: Shepherd’s Method™ (Governance Cadence)

External Source:

“Agentic AI’s Opportunities and Risks” (Berkeley SCET Blog, December 19, 2024) — describes the “Assess → Plan → Act → Reflect” loop.

Author / Organization:

Shomit Ghose – Stanford Center for Entrepreneurship & Technology (SCET).

Public Timestamp: December 19, 2024

SoStar Filing Timestamp: December 19, 2024

Type of Mirroring:

Analogous / Derivative. Nearly identical four-stage ethical-governance cadence as described in the Shepherd's Method™ filing.

SHA-256 Hash ID: Not applicable.

Enforcement Flag:

MEDIUM — Partial mirroring of methodology in academic context.

Entry 3: Mint-to Logic™ / Shepherd's Method™

External Source:

Coinbase X402 Protocol (May 6, 2025) — Internet-native payment standard incorporating credentialed agent layers.

Authors / Organization:

Erik Reppel, Nemil Dalal, and Dan Kim (Coinbase Global, Inc.).

Public Timestamp: May 6, 2025

SoStar Filing Timestamp: April 15, 2025

Type of Mirroring:

Derivative. Incorporates Mint-to-Access cycles and reflexive access controls directly parallel to the SoStar components.

SHA-256 Hash ID: Not applicable.

Enforcement Flag:

HIGH — Broad commercial deployment of core Mint-to Logic™ concepts.

Entry 4: Mint-to Logic™ / Chrono-Synaptic Memory Ledger™

External Source:

"Agentic AI Optimisation (AAIO)" – SSRN / ArXiv publication, April 16, 2025 — policy paper on AI alignment and governance.

Authors / Organization:

Luciano Floridi, Carlotta Buttaboni, Emmie Hine, Blake Novelli, and Tyler Schroder (Yale Digital Ethics Center).

Public Timestamp: April 16, 2025
SoStar Filing Timestamp: April 15, 2025

Type of Mirroring:

Analogous. Conceptual overlap only — no token mechanics or credential lifecycle implementations.

SHA-256 Hash ID: Not applicable.

Enforcement Flag:

LOW — Academic commentary; no technical reproduction detected.

Key Facts

- **Time Differential:** LOKA's publication occurred eight minutes after SoStar's filing receipt (confirmed by USPTO payment record 206648_63788821_2025-04-15_N417.PYMT.pdf).
 - **Functional Match:** LOKA introduces identity layers, verifiable credentials, intent-based execution, and post-quantum encryption — all core Mint-to Logic™ and RBGA™ functions.
 - **Integrity Proof:** SHA-256 manifest dated September 30, 2025 verifies file authenticity and continuity of chain-of-custody.
 - **Cross-Domain Diffusion:** Similar lifecycle governance appears within Coinbase X402, AWS, and Anthropic system releases after April 2025.
-

Interpretation & Enforcement

- **High-Flag Items (LOKA, X402):** Substantial reuse of core Mint-to Logic™ and RBGA™ mechanics; recommended for formal RBGA enforcement and licensing demand under Unified Notice.
 - **Medium-Flag Item (Berkeley SCET):** Partial methodological mirroring requiring academic attribution.
 - **Low-Flag Item (AAIO):** Conceptual influence only; monitor for future technical use.
-

Legal Integrity Statement

This ledger documents independently timestamped filings, publications, and artifacts recorded under the Unified Notice Framework. All analyses derive exclusively from verified materials within the Southern Star Pro. Studios project repository.

Unauthorized use or derivative application of this material without RBGA™ license is prohibited.

Interpretation & Enforcement Relevance

- **High Flag Items** (LOKA, X402): Show near-identical architectural reuse of Mint-to Logic™ and RBGA™ mechanics. Recommended for formal RBGA enforcement and licensing demand under Unified Notice.
- **Medium Flag Items** (Berkeley SCET): Demonstrate derivative ethical governance language; retain value for academic citation but require acknowledgment of source cadence.
- **Low Flag Items** (AAIO): Show conceptual echoes only; monitor for future implementations that may cross into technical reuse.

Legal Integrity Statement

This ledger documents independently timestamped filings, publications, and artifacts recorded under the Unified Notice Framework.
